

PLANT BENEFITS DELIVERED!

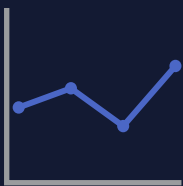

- 1 Maintain faster quality board production volume across your entire order mix spectrum with a monthly cleaned belt when...

⇒ Reliable evenly distributed belt temperatures meet the web entering the double backer section to quickly and predictably reach gel temp.

⇒ Once the bond is complete, open belt surface porosity effectively and evenly carries away and exhausts heat and moisture to complete the drying phase - preventing (and often eliminating) downstream post warp variables.

- 2 Significantly reduce or often completely eliminate the need for cleaning residual starch between order changes.

- 3 Longer lineal belt life due to more even wear.

Specialized caliper, damage & overall conditions report provided after each service.

FOR THOSE WHO PREFER TO RUN THEIR OPERATION BY “DOING THE NUMBERS” here’s a quote from a corrugator supervisor three days after we did his monthly cleaning:

“We’ve been able to push speeds this week. Here are some stats from my shift based on run time only, since our downtime was either machine or auxiliary equipment related. We hit 3.4 million ft² with 7hr 54min run time averaging 49,900 ft/hr Monday and 2.96 million ft² on Tuesday with 6hr 46min run time averaging 49,900. We ran a speed trial on a 100,000 ft run of 46-30C-46 (X) Monday and averaged 51,600 ft/hr. Historical averages were MTD 41,600, Q1 43,700, and YTD 39,800.”

INDUSTRY BEST PRACTICES DELIVERED!

- 24/7 “turn-key” service scheduled around your team’s production schedule and maintenance projects.
- Recognized leader recommended by all corrugator belt & OEM manufacturers.
- Safety lockout, PPE compliant, specially trained service technicians.

“

No selling required. Running results on Monday start up tell all!

...board coming off the line flatter & faster than we’ve ever seen!

Our time-to-getting-running-flat after order changes is cut down significantly since we started keeping the belt breathing - just like we always see after we install a new belt.

”

Everything we do at CBS is in support of corrugator operator excellence to reliably & consistently exceed production, quality volume, waste reduction & uptime goals!
